

Limiting WeBWork Emails

Students can send emails to their professor within a WeBWork problem. The default setting is to email any member of the WeBWork course that is at or above a TA level, including all professors and admins. We've set up WeBWork so that some members of the Math/Stat and ITS departments are administrators and can assist with management of the course. If a student emails a question, the email goes to the professor and all the administrators of WeBWork. To limit the recipients of these emails, adjust the settings per the instructions below.

- Log into your WeBWork course.
- Click Course Configuration (left menu) E-mail (choice at the top of the page)
- Change "*E-mail feedback from students automatically sent to this permission level and higher*" to "nobody"
- Set "*Additional addresses for receiving feedback e-mail*" to your email address. If you want the email to go to several people, separate the email address by commas"
