Recommended Apps

The following apps have been recommended by faculty teaching using the iPad Pro

Notability

Good general purpose app for annotating pdfs or note taking with the pencil. It can also record sound annotations.

Sample Grading Workflow

1. Collect student work through a Moodle assignments
2. On a computer, download all student files from Moodle in a zip file, unzip the file, and copy the files to Google Drive or Dropbox.
3. On the iPad Pro, open the files from Google Drive or Dropbox, and mark up as needed.
4. Save the modified file back to Google Drive or Dropbox.
5. On a computer, zip all the marked-up files and upload back to Moodle

Google Drive

Online file storage provided through your Gmail account. Access your College and personal Google Drive easily for use with Notability and other apps. It stores all your Google Docs, Google Sheets, and Google Slides. You can organize and create folders, share photos, videos, and more with others for collaboration or distribution.

Google Docs

Google Docs allows you to write and format text documents much like Microsoft Word. Share with anyone, edit and collaborate with other people in real time, chat and add comments. All your changes are automatically saved as you type. You can even use revision history to see old versions of the same spreadsheet, sorted by date and who made the change.

Google Slides

Google Slides allows you to create and edit slide presentations, much like Microsoft PowerPoint. Share with anyone, edit and collaborate with other people in real time, chat and add comments. All your changes are automatically saved as you type. You can even use revision history to see old versions of the same spreadsheet, sorted by date and who made the change.

Google Sheets

Google Sheets allows you to store and organize information much like Microsoft Excel. Share with anyone, edit and collaborate with other people in real time, chat and add comments. All your changes are automatically saved as you type. You can even use revision history to see old versions of the same spreadsheet, sorted by date and who made the change.

Microsoft OneNote

It might be surprising to see a Microsoft product on this list, but OneNote works well for keeping both handwritten and typed notes organized. You can choose to sync your notes to a Microsoft website where they can be automatically shared with your students.

Explain Everything

Explain Everything makes it easy to record screencasts. This is useful for creating 5-10 minute explanations or mini-lectures. Explain Everything records pen strokes and a voiceover, which can be exported as a video.

Wireless Projection

ITS has installed Apple TV's in many classrooms. Using Airplay you can project the iPad display to the Apple TV wirelessly. For information on using AirPlay from an iPad, see [Apple's AirPlay help page](#). If you'd like a demonstration, please contact Media Services (x6201, avbox).
